**DevOps Engineer with 1 year of hands-on Internship experience in automating AWS cloud infrastructure using Terraform, Kubernetes, Helm, Docker, and CI/CD pipelines. Experienced in building scalable, secure, and fault-tolerant environments with monitoring, alerting, and GitOps practices. Improved uptime to 99.9%, reduced deployment time by 40%, cut infrastructure costs by 15%, and enhanced application performance by 30% using automation, containerization, and cloud optimization strategies.**

## TECHNICAL SKILLS

| | |
|---|---|
| **Cloud Platforms : AWS** | EC2, S3, VPC, RDS, IAM, Lambda, CloudFront, CloudWatch, EKS, SNS, EBS, ELB, Route 53 |
| **Infrastructure as code** | Terraform (Providers, Data Source, State File, Remote Backend, Provisioners, Modules, Workspaces, Secrets) |
| **CI/CD & DevOps Tools** | Jenkins, GitHub Actions, ArgoCD, SonarQube, Trivy, Gitleaks |
| **Containerization & Orchestration** | Docker , Kubernetes (Deployments, Services, HPA, Ingress , Helm ) |
| **Security** | IAM, RBAC, Security Groups,SonarQube, Trivy, SSL ,Dependency-Check |
| **Monitoring & Logging** | Prometheus, Grafana, Alertmanager, Loki , Node Exporter |
| **Version Control** | Git & GitHub |

## EXPERIENCE

Gosure infoservices | DevOps Intern
July 2025 - July 2026 | Pune, Maharashtra

- Experienced in AWS to create, manage, and configure services including ALB, ASG, EC2, IAM, S3, EBS, Route53, RDS, Security Groups, VPC, CloudFront, EKS, and ECR, with automated deployments.
- Managed Docker containers, snapshots, image creation, and deployments using AWS ECS, AWS ECR, DockerHub, and Dockerfiles.
- Implemented highly available, scalable, secure, fault-tolerant production-ready infrastructure with Load Balancers, Auto Scaling, CloudFront, and S3.
- Automated scaling for peak workloads and optimized resource utilization.
- Managed Kubernetes clusters: nodes, configmaps, selectors, services, and pods.
- Implemented CI/CD pipelines with Maven, Jenkins, Nexus, SonarQube, and Trivy.
- Built monitoring and alerting systems to identify root cause issues for CPU, memory, or performance, reducing downtime by 18%.
- Configured Route53 with Auto Scaling Groups, routing to Load Balancers, ACM generation, and DNS mapping.
- Collaborated with development teams to improve deployments and ensure infrastructure security and compliance.

**Key Projects:**

***AI-Based X-Ray Detection System***

- Optimized Docker images, reducing image size by ~88% using slim base images, multi-stage builds, and removal of unnecessary files.
- Automated CI/CD workflows with GitHub Actions for faster, reliable releases.
- Orchestrated deployments on Amazon EKS using Terraform for scalable, production-grade infrastructure.
- Configured Kubernetes manifests and AWS Auto Scaling Groups for resilience and auto-healing under high load.
- Monitored application and node health using Prometheus & Grafana; configured Alertmanager for crash alerts.
- Integrated Trivy, SonarQube, and Gitleaks for security compliance.
- Conducted load testing and resource tuning, achieving 15% reduction in infrastructure cost.

***Microservices-based E-commerce Application***

- Optimized Docker multi-stage builds, reducing image size by ~78%.
- Designed infrastructure with Terraform (EC2, VPC, EKS, reusable modules, S3 + DynamoDB remote backend), reducing deployment time by ~40%.
- Enabled ALB, Auto Scaling, and database read replicas, improving scalability by ~40%.
- Applied Kubernetes Ingress Controller to reduce infrastructure cost by ~20% and optimize routing.
- Assisted in GitHub CI/CD pipeline integration with SonarQube & Trivy for code quality.
- Established Prometheus & Grafana dashboards to track metrics and visualize performance.
- Improved application performance by ~30% through S3 static content with CDN.
- Used ArgoCD for GitOps-based deployments.
- Configured Route53 for DNS mapping.

## Key Achievements

- Troubleshot production issues and received commendation for resolving critical AWS (VPC peering), Docker, and Kubernetes issues.
- Conducted load testing and resource tuning, achieving a 15% reduction in infrastructure cost.
- Automated infrastructure provisioning and deployments, reducing deployment time by ~40%.

## Education

B.Tech Electronics & Telecommunication Engineering – 8.4 CGPA. - 2023
Deogiri Institute of Engineering and Management Studies, Aurangabad (2023)

**Certifications Udemy** : AWS | Terraform | Jenkins | GCP | Java | SQL
